Fr. Anselm Adodo, OSB is a Nigerian Benedictine monk, Catholic priest, scholar, author and innovator whose work bridges African traditional knowledge, scientific research, community development and Benedictine spirituality. Ordained in 1997, he is a member of the Benedictine community at Ewu, Edo State, Nigeria.

He is the founder of Paxherbals, an institution dedicated to the research, testing and production of herbal medicine, which has grown to employ more than 200 staff. His pioneering work in phytomedicine has resulted in two granted patents and demonstrated the potential of African traditional medicine to meet rigorous clinical standards while retaining its cultural foundations.

An interdisciplinary scholar, Adodo holds two doctorates: one in medical sociology and anthropology, and another in the management of innovation and technology. His research explores African knowledge systems, indigenous medicine, integral development and community-based approaches to social and economic transformation. He is the author of twelve books published by international publishers, including Routledge, Peter Lang, Taylor & Francis and Beacon. His influential works include Afrikology and The Idea of the Communiversity, Integral Community Enterprise and The Healing Plants of Nigeria, co-authored with Maurice Iwu.

Adodo currently serves as Senior Research Fellow and Special Advisor to the Executive Director at the Collegeville Institute for Ecumenical and Cultural Research, at Saint John's Abbey, Minnesota, USA. His work encompasses organizational renewal, intercultural collaboration, Benedictine formation and interreligious engagement.

Across his monastic, scientific and academic work, Adodo advocates an integrated understanding of human well-being—one that recognizes the relationship between health, spirituality, indigenous knowledge and community life.
